

ACCESS FREE DEEP GREEN RESISTANCE STRATEGY TO SAVE THE PLANET

Deep Green Resistance

For years, Derrick Jensen has asked his audiences, "Do you think this culture will undergo a voluntary transformation to a sane and sustainable way of life?" No one ever says yes. Deep Green Resistance starts where the environmental movement leaves off: industrial civilization is incompatible with life. Technology can't fix it, and shopping—no matter how green—won't stop it. To save this planet, we need a serious resistance movement that can bring down the industrial economy. Deep Green Resistance evaluates strategic options for resistance, from nonviolence to guerrilla warfare, and the conditions required for those options to be successful. It provides an exploration of organizational structures, recruitment, security, and target selection for both aboveground and underground action. Deep Green Resistance also discusses a culture of resistance and the crucial support role that it can play. Deep Green Resistance is a plan of action for anyone determined to fight for this planet—and win.

Earth at Risk

"In America, four hundred people own the wealth of more than half of the American population. We should not be saying tax the rich, but instead we should be saying take their money and redistribute it, take their property and redistribute it." —Arundhati Roy Industrial civilization is devouring the planet and the future. The oceans are acidifying, whole mountains have been laid to waste, and the climate is teetering into chaos. Every biome is approaching collapse. And fifty years of environmentalism hasn't even slowed the rate of destruction. Yet environmentalists are not considering strategies that might actually prevent the looming biocide we are facing. Until *Earth at Risk*. *Earth at Risk: Building a Resistance Movement to Save the Planet* is an annual conference featuring environmental thinkers and activists who are willing to ask the hardest questions about the seriousness of our situation. The conference is convened by Derrick Jensen, acclaimed author of *Endgame*, who has argued that we need a resistance movement against civilization itself. The twelve people in this volume present an impassioned critique of the dominant culture from every angle: William Catton Jr. explains ecological overshoot; Thomas Linzey gives a fiery call for community sovereignty; Jane Caputi exposes patriarchy's mythic dismemberment of the Goddess; Aric McBay discusses historically effective resistance strategies; and Stephanie McMillan takes down capitalism. One by one, they build an unassailable case that we need to deprive the rich of their ability to steal from the poor and the powerful of their ability to destroy the planet. These speakers offer their ideas on what can be done to build a real resistance movement, one that includes all levels of direct action—action that can actually match the scale of the problem. *Earth at Risk* includes: Derrick Jensen, author of *Endgame*, *A Language Older than Words*, and many others. Lierre Keith, author of *The Vegetarian Myth: Food, Justice, and Sustainability*; coauthor of *Deep Green Resistance: Strategy to Save the Planet*. Nora Barrows-Friedman, journalist and photographer; correspondent for outlets such as *The Electronic Intifada*, *Al Jazeera*, and *Truthout.org*. Jane Caputi, author of *The Age of Sex Crime*; *Gossips, Gorgons, and Crones: The Fates of the Earth*; and *Goddesses and Monsters: Women, Myth, Power and Popular Culture*. William Catton Jr., sociologist, author of *Overshoot: The Ecological Basis of Revolutionary Change*, and *Bottleneck: Humanity's Impending Impasse*. Gail Dines, a founding member of *Stop Porn Culture*, author of *Pornland: How Porn Has Hijacked Our Sexuality*. Thomas Linzey, executive director of the *Community Environmental Legal Defense Fund*. Aric Mcbay, coauthor of *Deep Green Resistance: Strategy to Save the Planet*. Stephanie Mcmillan, cartoonist; author of *The Beginning of the American Fall*; organizer for the anti-capitalist/anti-imperialist collective *One Struggle*. Riki Ott, marine biologist, author of *Not One Drop: Betrayal and Courage in the*

Wake of the Exxon Valdez Oil Spill. Arundhati Roy, author of *An Ordinary Person's Guide to Empire*; *Field Notes on Democracy: Listening to Grasshoppers*; and many others. Waziyatawin, historian and anti-colonial activist, author of *For Indigenous Eyes Only*; *What Does Justice Look Like? The Struggle for Liberation in Dakota Homeland*; and other books.

Bright Green Lies

“This disturbing but very important book makes clear we must dig deeper than the normal solutions we are offered.”—Yvon Chouinard, founder of Patagonia Works
“Bright Green Lies exposes the hypocrisy and bankruptcy of leading environmental groups and their most prominent cheerleaders. The best-known environmentalists are not in the business of speaking truth, or even holding up rational solutions to blunt the impending ecocide, but instead indulge in a mendacious and self-serving delusion that provides comfort at the expense of reality. They fail to state the obvious: We cannot continue to wallow in hedonistic consumption and industrial expansion and survive as a species. The environmental debate, Derrick Jensen and his coauthors argue, has been distorted by hubris and the childish desire by those in industrialized nations to sustain the unsustainable. All debates about environmental policy need to begin with honoring and protecting, not the desires of the human species, but with the sanctity of the Earth itself. We refuse to ask the right questions because these questions expose a stark truth—we cannot continue to live as we are living. To do so is suicidal folly. ‘Tell me how you seek, and I will tell you what you are seeking,’ the German philosopher Ludwig Wittgenstein said. This is the power of Bright Green Lies: It asks the questions most refuse to ask, and in that questioning, that seeking, uncovers profound truths we ignore at our peril.”—Chris Hedges, Pulitzer Prize-winning journalist and author of *America: The Farewell Tour*

What We Leave Behind

What We Leave Behind is a piercing, impassioned guide to living a truly responsible life on earth. Human waste, once considered a gift to the soil, has become toxic material that has broken the essential cycle of decay and regeneration. Here, award-winning author Derrick Jensen and activist Aric McBay weave historical analysis and devastatingly beautiful prose to remind us that life—human and nonhuman—will not go on unless we do everything we can to facilitate the most basic process on earth, the root of sustainability: one being's waste must always become another being's food.

What We Think About When We Try Not To Think About Global Warming

“Today, about 98 percent of scientists affirm that climate change is human made, and about 2 percent still question it. Despite that overwhelming majority, though, about half the population of rich countries, like ours, choose to believe the 2 percent. And, paradoxically, this large camp of deniers grows even larger as more and more alarming proof of climate change has cropped up over the last decades. This disconnect has both climate scientists and activists scratching their heads, growing anxious, and responding, usually, by repeating more facts to 'win' the argument. But, the more climate facts pile up, the greater the resistance to them grows, and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead. Is humanity up to the task? It is a catch-22 that starts, says psychologist and climate expert Per Espen Stoknes, from an inadequate understanding of the way most humans think, act, and live in the world around them. With dozens of examples, he shows how to retell the story of climate change and apply communication strategies more fit for the task.”--Publisher's description.

Endgame, Volume 1

The long-awaited companion piece to Derrick Jensen's immensely popular and highly acclaimed works *A Language Older Than Words* and *The Culture of Make Believe*. Accepting the increasingly widespread belief that industrialized culture inevitably erodes the natural world, *Endgame* sets out to explore how this relationship impels us towards a revolutionary and as-yet undiscovered shift in strategy. Building on a series

of simple but increasingly provocative premises, Jensen leaves us hoping for what may be inevitable: a return to agrarian communal life via the disintegration of civilization itself.

The Long Descent

Americans are expressing deep concern about US dependence on petroleum, rising energy prices and the threat of climate change. Unlike the energy crisis of the 1970s, however, there is a lurking fear that, now, the times are different and the crisis may not easily be resolved. *The Long Descent* examines the basis of such fear through three core themes: Industrial society is following the same well-worn path that has led other civilizations into decline, a path involving a much slower and more complex transformation than the sudden catastrophes imagined by so many social critics today. The roots of the crisis lie in the cultural stories that shape the way we understand the world. Since problems cannot be solved with the same thinking that created them, these ways of thinking need to be replaced with others better suited to the needs of our time. It is too late for massive programs for top-down change; the change must come from individuals. Hope exists in actions that range from taking up a handicraft or adopting an "obsolete" technology, through planting an organic vegetable garden, taking charge of your own health care or spirituality, and building community. Focusing eloquently on constructive adaptation to massive change, this book will have wide appeal.

Endgame, Volume 2

Incensed and hopeful, impassioned and lucid, this volume focuses on mankind's ability to adapt to the impending ecological revolution.

To Life!

This title documents the burgeoning eco art movement from A to Z, presenting a panorama of artistic responses to environmental concerns, from Ant Farms anti-consumer antics in the 1970s to Marina Zurkows 2007 animation that anticipates the havoc wreaked upon the planet by global warming.

The Derrick Jensen Reader

In an age marked by seemingly unstoppable environmental collapse and the urgent quest for solutions, environmental philosopher Derrick Jensen, the voice of the growing deep ecology movement, reveals for us new seeds of hope. Here for the first time in *The Derrick Jensen Reader* are collected generous selections from his prescient, unflinching books on the problem of civilization and the path to true resistance. In the acclaimed *A Language Older Than Words*, Jensen dissects his own abusive childhood to examine the pathology of Western culture and shares with us the power and beauty of an alliance with the natural world. He continues to use the lens of his own experience as well as the wisdom of philosophers, activists, and teachers to expose oppression and call us to action in his other early works, *Listening to the Land*, *A Culture of Make Believe*, *Strangely Like War*, and *Walking on Water*. We see his analysis deepen when he asks us to accept that the only moral response to biocide is resistance in the two-volume *Endgame*, a truth he explores further in *Thought to Exist in the Wild*, *What We Leave Behind*, the graphic novel *As The World Burns*, and in his two novels, *Songs of the Dead* and *Lives Less Valuable*. And in *Dreams*, Jensen's latest work, he leads us still further toward his vision for a healed planet, freeing us to see beyond the limits of our present culture to a future luminous with meaning.

Anthropocene Encounters: New Directions in Green Political Thinking

Explores the significance of the Anthropocene for environmental politics, analysing political concepts in view of contemporary environmental challenges.

The Myth of Human Supremacy

In this impassioned polemic, radical environmental philosopher Derrick Jensen debunks the near-universal belief in a hierarchy of nature and the superiority of humans. Vast and underappreciated complexities of nonhuman life are explored in detail—from the cultures of pigs and prairie dogs, to the creative use of tools by elephants and fish, to the acumen of caterpillars and fungi. The paralysis of the scientific establishment on moral and ethical issues is confronted and a radical new framework for assessing the intelligence and sentience of nonhuman life is put forth. Jensen attacks mainstream environmental journalism, which too often limits discussions to how ecological changes affect humans or the economy—with little or no regard for nonhuman life. With his signature compassionate logic, he argues that when we separate ourselves from the rest of nature, we in fact orient ourselves against nature, taking an unjust and, in the long run, impossible position. Jensen expresses profound disdain for the human industrial complex and its ecological excesses, contending that it is based on the systematic exploitation of the earth. Page by page, Jensen, who has been called the philosopher-poet of the environmental movement, demonstrates his deep appreciation of the natural world in all its intimacy, and sounds an urgent call for its liberation from human domination.

As the World Burns

Two of America's most talented activists team up to deliver a bold and hilarious satire of modern environmental policy in this fully illustrated graphic novel. The U.S. government gives robot machines from space permission to eat the earth in exchange for bricks of gold. A one-eyed bunny rescues his friends from a corporate animal-testing laboratory. And two little girls figure out the secret to saving the world from both of its enemies (and it isn't by using energy-efficient light bulbs or biodiesel fuel). As the World Burns will inspire you to do whatever it takes to stop ecocide before it's too late.

Confessions of a Recovering Environmentalist

Paul Kingsnorth was once an activist, an ardent environmentalist. He fought against rampant development and the depredations of a corporate world that seemed hell-bent on ignoring a looming climate crisis in its relentless pursuit of profit. But as the environmental movement began to focus on 'sustainability' rather than the defence of wild places for their own sake and as global conditions worsened, he grew disenchanted with the movement that he once embraced. He gave up what he saw as the false hope that residents of the First World would ever make the kind of sacrifices that might avert the severe consequences of climate change. Full of grief and fury as well as passionate, lyrical evocations of nature and the wild, *Confessions of a Recovering Environmentalist* gathers the wave-making essays that have charted the change in Kingsnorth's thinking. In them he articulates a new vision that he calls 'dark ecology,' which stands firmly in opposition to the belief that technology can save us, and he argues for a renewed balance between the human and nonhuman worlds. Provocative and urgent, iconoclastic and fearless, this ultimately hopeful book - which includes the much-discussed 'Uncivilization' manifesto - poses hard questions about how we've lived and how we should live.

This Changes Everything

Explains why the environmental crisis should lead to an abandonment of "free market" ideologies and current political systems, arguing that a massive reduction of greenhouse emissions may offer a best chance for correcting problems.

Deep Green Resistance

What the world needs today is a good dose of indigenous realism, says Native American scholar Daniel Wildcat in this thoughtful, forward-looking treatise. *Red Alert!* seeks to debunk the modern myths that humankind is the center of creation.

Peak Oil Survival

Derrick Jensen takes no prisoners in *The Culture of Make Believe*, his brilliant and eagerly awaited follow-up to his powerful and lyrical *A Language Older Than Words*. What begins as an exploration of the lines of thought and experience that run between the massive lynchings in early twentieth-century America to today's death squads in South America soon explodes into an examination of the very heart of our civilization. *The Culture of Make Believe* is a book that is as impeccably researched as it is moving, with conclusions as far-reaching as they are shocking.

Red Alert!

"Education for People and Planet: Creating Sustainable Futures for All explores the complex relationship between education and the new 2030 Agenda for Sustainable Development, covering six fundamental pillars - Planet, Prosperity, People, Peace, Place and Partnerships. This report shows that education will not deliver its full potential unless participation rates increase dramatically and sustainable development guides education system reform. It also warns of the destructive impact that climate change, conflict, unsustainable consumption and the increasing gap between rich and poor have on education. A huge transformation is needed if we are to create sustainable futures for all. This edition of the Global Education Monitoring Report (GEM Report) is the first in a series that will assess the progress of education under the new Sustainable Development Goals (SDGs). The GEM Report provides evidence-based recommendations on the policies, strategies and programmes needed to meet the ambitious Education 2030 vision. It discusses the challenges of monitoring progress on the new global education goal and targets to ensure improvement in access, participation, completion, learning and reduced inequality. It provides readers with an authoritative source to enable them to argue for the value and importance of education at all levels of decision-making."--Back cover

The Culture of Make Believe

'Timely, necessary and important' J.K. Rowling '[This book is] guaranteed to remind us what we have still to fight for. I can't think of a single person who wouldn't benefit from reading it' Observer 'Bindel is a rock star of second-wave feminism . . . an important, courageous book' The Times 'Bindel delivers a robust call to arms in every chapter . . . this book could not be timelier . . . As a young feminist who has finally seen the light, I consider it essential reading' The Critic Feminism is a quest for the liberation of women from patriarchy. Feminism strives for a world in which women are not oppressed. Feminism prioritises exposing and ending male violence towards women and girls. This is Julie Bindel's feminism, a definition born of 40 years at the front line of the feminist movement. Why then, she asks, is feminism the only social justice movement in the world that is expected to prioritise every other issue before pursuing its own objective of women's liberation? Why does the movement appear to be moving backwards, accommodating the rights and feelings of men and leaving women in the cold? Women make up half the global population yet why is feminism still treated as a minority movement? In this searing and ground-breaking book, Bindel deconstructs the many pervasive myths about feminism - Do women really want what men have? Can men be feminists? Are women liberated by sexual violation? - assessing whether feminism has achieved its goals and debunking theories that second wave feminism is irrelevant and one-dimensional. Bindel shines a light on the most important issues, including pornography, sexual violence and prostitution. Drawing on Bindel's own experiences, as well as countless interviews with women and girls of all ages and backgrounds (as well as contributions from commentators such as Gloria Steinem and Chimamanda Ngozi Adichie), *Feminism for Women* presents a clear-sighted view of why feminism is a proud social movement that every woman on the planet benefits from. The invisible forces of misogyny affect us all. This book is a call to arms to reclaim feminism for all women. Only together can we resist and overcome.

Education for People and Planet

Global warming is one of today's greatest challenges. The science of climate change leaves no doubt that policies to cut emissions are overdue. Yet, after twenty years of international talks and treaties, the world is now in gridlock about how best to do this. David Victor argues that such gridlock has arisen because international talks have drifted away from the reality of what countries are willing and able to implement at home. Most of the lessons that policy makers have drawn from the history of other international environmental problems won't actually work on the problem of global warming. Victor argues that a radical rethinking of global warming policy is required and shows how to make international law on global warming more effective. This book provides a roadmap to a lower carbon future based on encouraging bottom-up initiatives at national, regional and global levels, leveraging national self-interest rather than wishful thinking.

Feminism for Women

When a meteorite lands in Surrey, the locals don't know what to make of it. But as Martians emerge and begin killing bystanders, it quickly becomes clear—England is under attack. Armed soldiers converge on the scene to ward off the invaders, but meanwhile, more Martian cylinders land on Earth, bringing reinforcements. As war breaks out across England, the locals must fight for their lives, but life on Earth will never be the same. This is an unabridged version of one of the first fictional accounts of extraterrestrial invasion. H. G. Wells's military science fiction novel was first published in book form in 1898, and is considered a classic of English literature.

Global Warming Gridlock

Jensen's furthest-reaching book yet, *Dreams* challenges the "destructive nihilism" of writers like Richard Dawkins and Sam Harris who believe that there is no reality outside what can be measured using the tools of science. He introduces the mythologies of ancient cultures and modern indigenous peoples as evidence of alternative ways of understanding reality, informed by thinkers such as American Indian writer Jack Forbes, theologian and American Indian rights activist Vine Deloria, Shaman Martin Prechtel, Dakota activist and scholar Waziyatawin, and Okanagan Indian writer Jeannette Armstrong. He draws on the wisdom of Dr. Paul Stamets, author of *Mycelium Running: How Mushrooms Can Help Save the World*, sociologist Stanley Aronowitz, who discusses science's lack of accountability to the earth, and many more. As in his other books, Jensen draws heavily from his own life experience living alongside the frogs, redwoods, snails, birds and bears of the upper northwest, about which he writes with exquisite tenderness. Having taken on the daunting task of understanding one's dreams as a source of knowledge, Jensen achieves the near-impossible in this breathtakingly brave and ambitious new work.

The War of the Worlds

This powerful book sets out arguments and an agenda of policy proposals for achieving a sustainable and prosperous, but non-growing economy, also known as a steady-state economy. The authors describe a plan for solving the major social and environmental problems which face us today on a finite planet with a rapidly growing population.

Dreams

'Read this book. Saving Planet Earth starts right here, right now' Stella McCartney From the bestselling author of *Eating Animals*, a brilliantly fresh and accessible take on climate change - and what we can do about it 'Climate change is the greatest crisis humankind has ever faced. It is that straightforward, that fraught. Where were you when you made your decision?' It is all too easy to feel paralysed and hopeless in the face of climate crisis, but the truth is that every one of us has the power to change history's course. We

have done it before: making collective sacrifices to protect our freedoms, our families, our way of life. And we can do it again. In this extraordinarily powerful and deeply personal book, Jonathan Safran Foer lays bare the battle to save the planet. Calling each one of us to action, he answers the most urgent question of all: what will it take for things to change? It all starts with what we eat for breakfast. 'Eye-opening' New York Times Book Review 'Safran Foer's new approach gives me hope' Observer

Enough Is Enough

From the author of the critically acclaimed, award-winning bestseller *Ishmael* and its sequel, *My Ishmael*, comes a powerful novel with one of the most profound spiritual testaments of our time “A compelling ‘humantale’ that will unglue, stun, shock, and rearrange everything you’ve learned and assume about Western civilization and our future.”—Paul Hawken, author of *The Ecology of Commerce* Father Jared Osborne has received an extraordinary assignment from his superiors: Investigate an itinerant preacher stirring up deep trouble in central Europe. His followers call him B, but his enemies say he’s something else: the Antichrist. However, the man Osborne tracks across a landscape of bars, cabarets, and seedy meeting halls is no blasphemous monster—though an earlier era would undoubtedly have rushed him to the burning stake. For B claims to be enunciating a gospel written not on any stone or parchment but in our very genes, opening up a spiritual direction for humanity that would have been unimaginable to any of the prophets or saviors of traditional religion. Pressed by his superiors for a judgement, Osborne is driven to penetrate B’s inner circle, where he soon finds himself an anguished collaborator in the dismantling of his own religious foundations. More than a masterful novel of adventure and suspense, *The Story of B* is a rich source of compelling ideas from an author who challenges us to rethink our most cherished beliefs. Explore Daniel Quinn’s spiritual *Ishmael* trilogy: *ISHMAEL* • *MY ISHMAEL* • *THE STORY OF B*

We are the Weather

This Intergovernmental Panel on Climate Change Special Report (IPCC-SRREN) assesses the potential role of renewable energy in the mitigation of climate change. It covers the six most important renewable energy sources - bioenergy, solar, geothermal, hydropower, ocean and wind energy - as well as their integration into present and future energy systems. It considers the environmental and social consequences associated with the deployment of these technologies and presents strategies to overcome technical as well as non-technical obstacles to their application and diffusion. SRREN brings a broad spectrum of technology-specific experts together with scientists studying energy systems as a whole. Prepared following strict IPCC procedures, it presents an impartial assessment of the current state of knowledge: it is policy relevant but not policy prescriptive. SRREN is an invaluable assessment of the potential role of renewable energy for the mitigation of climate change for policymakers, the private sector and academic researchers.

The Story of B

A sweeping near future dystopic fantasy in the Octavia Butlerian vein of the *Parable of the Sower* novels. Political activist and anarchist author Aric McBay (Full Spectrum Resistance) toggles between the years 2028 and 2051 to give us the experience, with breathtaking realism, of what might happen in the span of just one generation to a society that is already on the brink of collapse. In 2028 environmental activists hesitate to take the fight to the extreme of violent revolution. Twenty years later, with the natural environment now seriously degraded, the revolution is brought to the activists, rather than the other way around, by an authoritarian government willing to resort to violence, willing to let the majority suffer from hunger and poverty, in order to control its citizens when the government can no longer provide them with a decent quality of life. So it is the activists who must defend their communities, their neighbors, through a more humane and in some ways more conservative status quo of care and moderation. And the outcome here is determined by the actions of those who resist more than it is by the actions of the nominally powerful.

Renewable Energy Sources and Climate Change Mitigation

The Intergovernmental Panel on Climate Change (IPCC) is the leading international body for assessing the science related to climate change. It provides policymakers with regular assessments of the scientific basis of human-induced climate change, its impacts and future risks, and options for adaptation and mitigation. This IPCC Special Report on the Ocean and Cryosphere in a Changing Climate is the most comprehensive and up-to-date assessment of the observed and projected changes to the ocean and cryosphere and their associated impacts and risks, with a focus on resilience, risk management response options, and adaptation measures, considering both their potential and limitations. It brings together knowledge on physical and biogeochemical changes, the interplay with ecosystem changes, and the implications for human communities. It serves policymakers, decision makers, stakeholders, and all interested parties with unbiased, up-to-date, policy-relevant information. This title is also available as Open Access on Cambridge Core.

Kraken Calling

In addressing environmental challenges like climate change, governments, charities and business tend to focus either on changing policy or business practice, or on urging individuals to adopt different behaviour. The role of human identity is largely absent from the debate. And yet, our identities - who we see ourselves as being - have a profound impact in shaping the responses we make to environmental challenges. This provocative book will rattle the cages of many environmentalists, 'green-minded' business-people and policy makers. In it, Crompton and Kasser suggest that many current approaches to addressing problems like climate change may actually inadvertently serve to reinforce those aspects of identity that drive us towards unsustainable behaviour in first place. They suggest that it will only be by re-shaping political debate and social institutions in order to promote more helpful aspects of identity that we can have any hope of meeting environmental challenges. The book closes by highlighting the opportunities that this perspective presents for building new alliances between people working not just on environmental issues, but also on a range of social and developmental concerns: Many of those aspects of human identity that frustrate progress on the environmental agenda also frustrate progress on meeting other challenges.

The Ocean and Cryosphere in a Changing Climate

This damning account of the forces that have hijacked progress on climate change shares a bold vision of what it will take, politically and economically, to face the existential threat of global warming head-on. In the past few years, it has become impossible (for most) to deny the effects of climate change and that the planet is warming, and to acknowledge that we must act. But a new kind of denialism is taking root in the halls of power, shaped by a quarter-century of neoliberal policies, that threatens to doom us before we've grasped the full extent of the crisis. As Kate Aronoff argues, since the 1980s and 1990s, economists, pro-business Democrats and Republicans in the US, and global organizations like the UN and the World Economic Forum have all made concessions to the oil and gas industry that they have no intention of reversing. What's more, they believe that climate change can be solved through the market, capitalism can be a force for good, and all of us, corporations included, are fighting the good fight together. These assumptions, Aronoff makes abundantly clear, will not save the planet. Drawing on years of reporting and rigorous economic analysis, Aronoff lays out a robust vision for what will, detailing how to constrain the fossil fuel industry; transform the economy into a sustainable, democratic one; mobilize political support; create effective public-private partnerships; enact climate reparations; and adapt to inevitable warming in a way that is just and equitable. Our future, Overheated makes clear, will require a radical reimagining of our politics and our economies, but if done right, it will save the world.

Meeting Environmental Challenges

This book presents an overview of the key debates that took place during the Economic and Social Council meetings at the 2007 High-level Segment, at which ECOSOC organized its first biennial Development

Cooperation Forum. The discussions also revolved around the theme of the second Annual Ministerial Review, "Implementing the internationally agreed goals and commitments in regard to sustainable development."--P. 4 of cover.

Overheated

EcoJustice Education offers a powerful model for cultural ecological analysis and a pedagogy of responsibility, providing teachers and teacher educators with the information and classroom practices they need to help develop citizens who are prepared to support and achieve diverse, democratic, and sustainable societies in an increasingly globalized world. Readers are asked to consider curricular strategies to bring these issues to life in their own classrooms across disciplines. Designed for introductory educational foundations and multicultural education courses, the text is written in a narrative, conversational style grounded in place and experience, but also pushes students to examine the larger ideological, social, historical, and political contexts of the crises humans and the planet we inhabit are facing. Pedagogical features in each chapter include a Conceptual Toolbox, activities accompanying the theoretical content, examples of lessons and teacher reflections, and suggested readings, films, and links. The Second Edition features a new chapter on Anthropocentrism; new material on Heterosexism; updated statistics and examples throughout; new and updated Companion Website content.

Achieving Sustainable Development and Promoting Development Cooperation

There is a growing interest in the character and the challenge of the Anthropocene. Although efforts to pin down beginning dates of this epoch have been debated, there is a broad consensus that humanity is facing an unprecedented challenge to surviving on Earth, a challenge which humans have created ourselves. Undeniably, we have had and continue to have impacts on the planet as a whole. These include ravaging bushfires and unprecedented flooding caused by climate change, spiking levels of carbon dioxide levels, and widespread loss of biodiversity. The challenge has been expressed in various ways: the larger challenges of climate change or ocean garbage toxicity, the subtler challenges that would support such large efforts by cultivating a new aesthetic. The present book asks of us to reach for the deeper grounding of all such efforts. Perhaps that asking is best hinted at by pluralizing the word character in a paradoxical non-question: "What is to be the 'character' of the characters transforming the Anthropocene from its present negativity to a positive period of human flourishing." What is missing, what we are in the dark about, is the apparently simple turn that would have us asking, "What's what?" The focus must be concrete: so we are to think of miners and farmers and reformers and economists and educators, but primarily of ourselves as whats. Might we begin the positive Anthropocene's success by beginning to sow what comprehendingly?

Green Strategy

John Dryzek provides an accessible introduction to thinking about the environment by looking at the way people use language on environmental issues. He analyses the main discourses from the last 30 years and those likely to be influential in future.

EcoJustice Education

Thomas Anderson has just graduated from CSU Stentoria, with his degree in Political Science. It's an election year, and as a young "progressive" in California who has been raised by equally progressive parents, he is very much concerned with the political issues currently being discussed in the mass media. A chance encounter with a fellow graduate named Kelly Kelso, however, shakes up his settled view of the world. He is challenged to examine the rising number of alternatives to the two-party system presented by "third party" movements such as the Libertarian Party and the Green Party, and is forced to acknowledge that there is far more to politics than simply Democrat versus Republican, and liberal versus conservative. Thomas delves energetically into not only the growing Libertarian movement, but the free market perspective

of the Austrian School of economics, as well as the rigid yet compelling view of Ayn Rand's philosophy of Objectivism. His explorations grow wider, now encompassing the Tea Party movement and the Christian Right; tax resisters and gun rights advocates; survivalists and militia members; anarchists, communists, and Democratic Socialists; as well as the Occupy Wall Street movement. He debates the radical environmental views of animal welfare and animal rights advocates, and challenges opponents of corporate globalism as well as deniers of global warming, as he struggles to reformulate and articulate his own developing beliefs, while coping with a sea of conflicting ideas and opposition. But this abstract political theory is brought into sharp encounter with concrete political reality, when Thomas hears a news report of an armed conflict with authorities taking place just outside of town, involving someone with whom he has become emotionally involved...

Seeding the Positive Anthropocene

The maker movement culture emphasizes informal, peer-led, and shared learning, while driving innovation. Even though some experts view the maker movement as a move backward to pre-industrial revolution manufacturing, the purpose of making is not to have an abundance of tools in one space; rather, it is about helping participants create personally meaningful projects with the help of mentors, experts, and peers in ad-hoc learning communities. *American Perspectives on Learning Communities and Opportunities in the Maker Movement* is an essential reference source that discusses the maker movement in the United States, artisanal perspectives, and the learning-through-doing perspective. Featuring research on topics such as educational spaces, management, creativity labs, makerspaces, and operating procedures, this book is ideally designed for entrepreneurs, artisans, academicians, researchers, manufacturing professionals, and students.

Politics of the Earth

Prominent scholars and practitioners in the field of global environmental politics consider the ecological and political realities of life on the new earth, and probe the field's deepest and most enduring questions at a time of increasing environmental stress. Arranged in complementary pairs, included are - reflections on environmental pedagogy, analysis of new geopolitical realities, reflections on the power of social movements and international institutions, and calls for more compelling narratives to promote environmental action.
